Android Project Structure

AndroidManifest structure

AndroidManifest.xml

```
<?xml version="1.0" encoding="utf-8"?>
<manifest xmlns:android="http://schemas.android.com/apk/res/android"
    package="de.test.hello"
    android:versionCode="1"
    android:versionName="1.0">
    <application android:icon="@drawable/icon" android:label="@string/app_name">
        <activity android:name=".HelloWorkshopActivity"
            android:label="@string/app_name">
            <intent-filter>
                <action android:name="android.intent.action.MAIN" />
                <category android:name="android.intent.category.LAUNCHER" />
            </intent-filter>
        </activity>
    </application>
    <uses-sdk android:minSdkVersion="4" />
</manifest>
```

Base package name

Numeric version code, increase with new version

Version name displayed in Market

Reference to icon in drawable-xxx folders

Reference to app_name in strings.xml

Main activity's class name

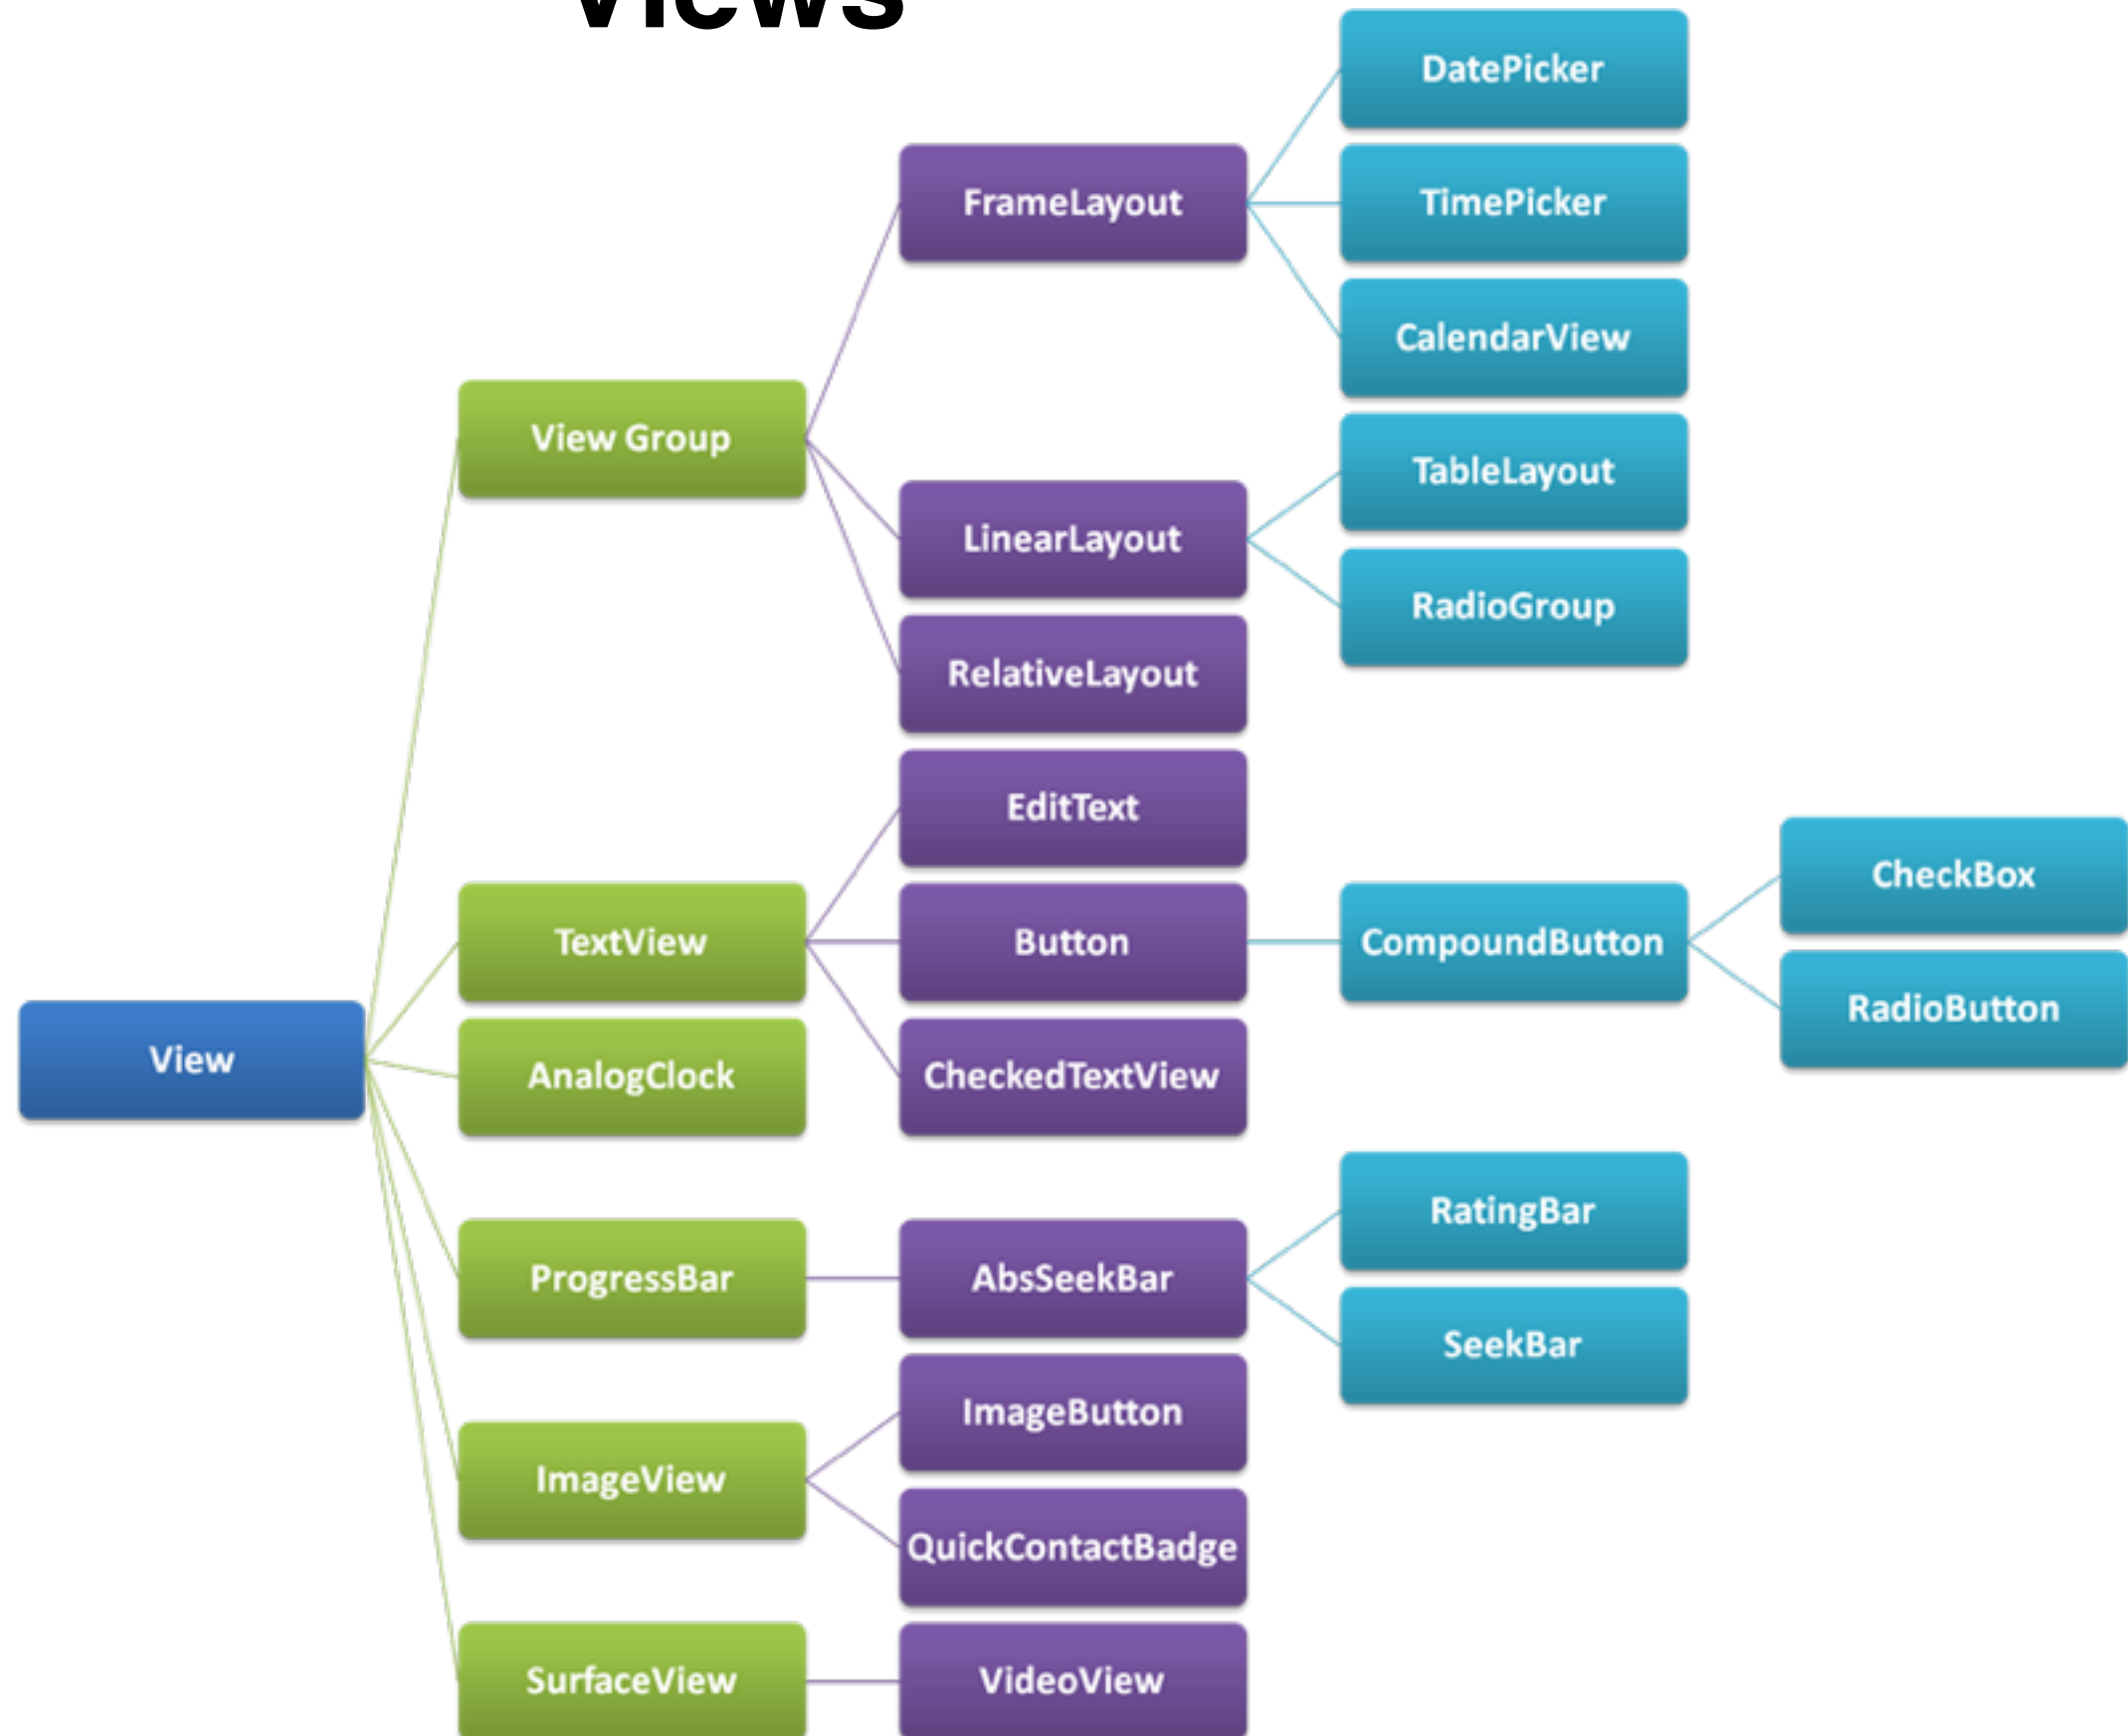

Main activity's label (at the top of the screen)

Intent filter to define that this activity can be launched from the launch menu

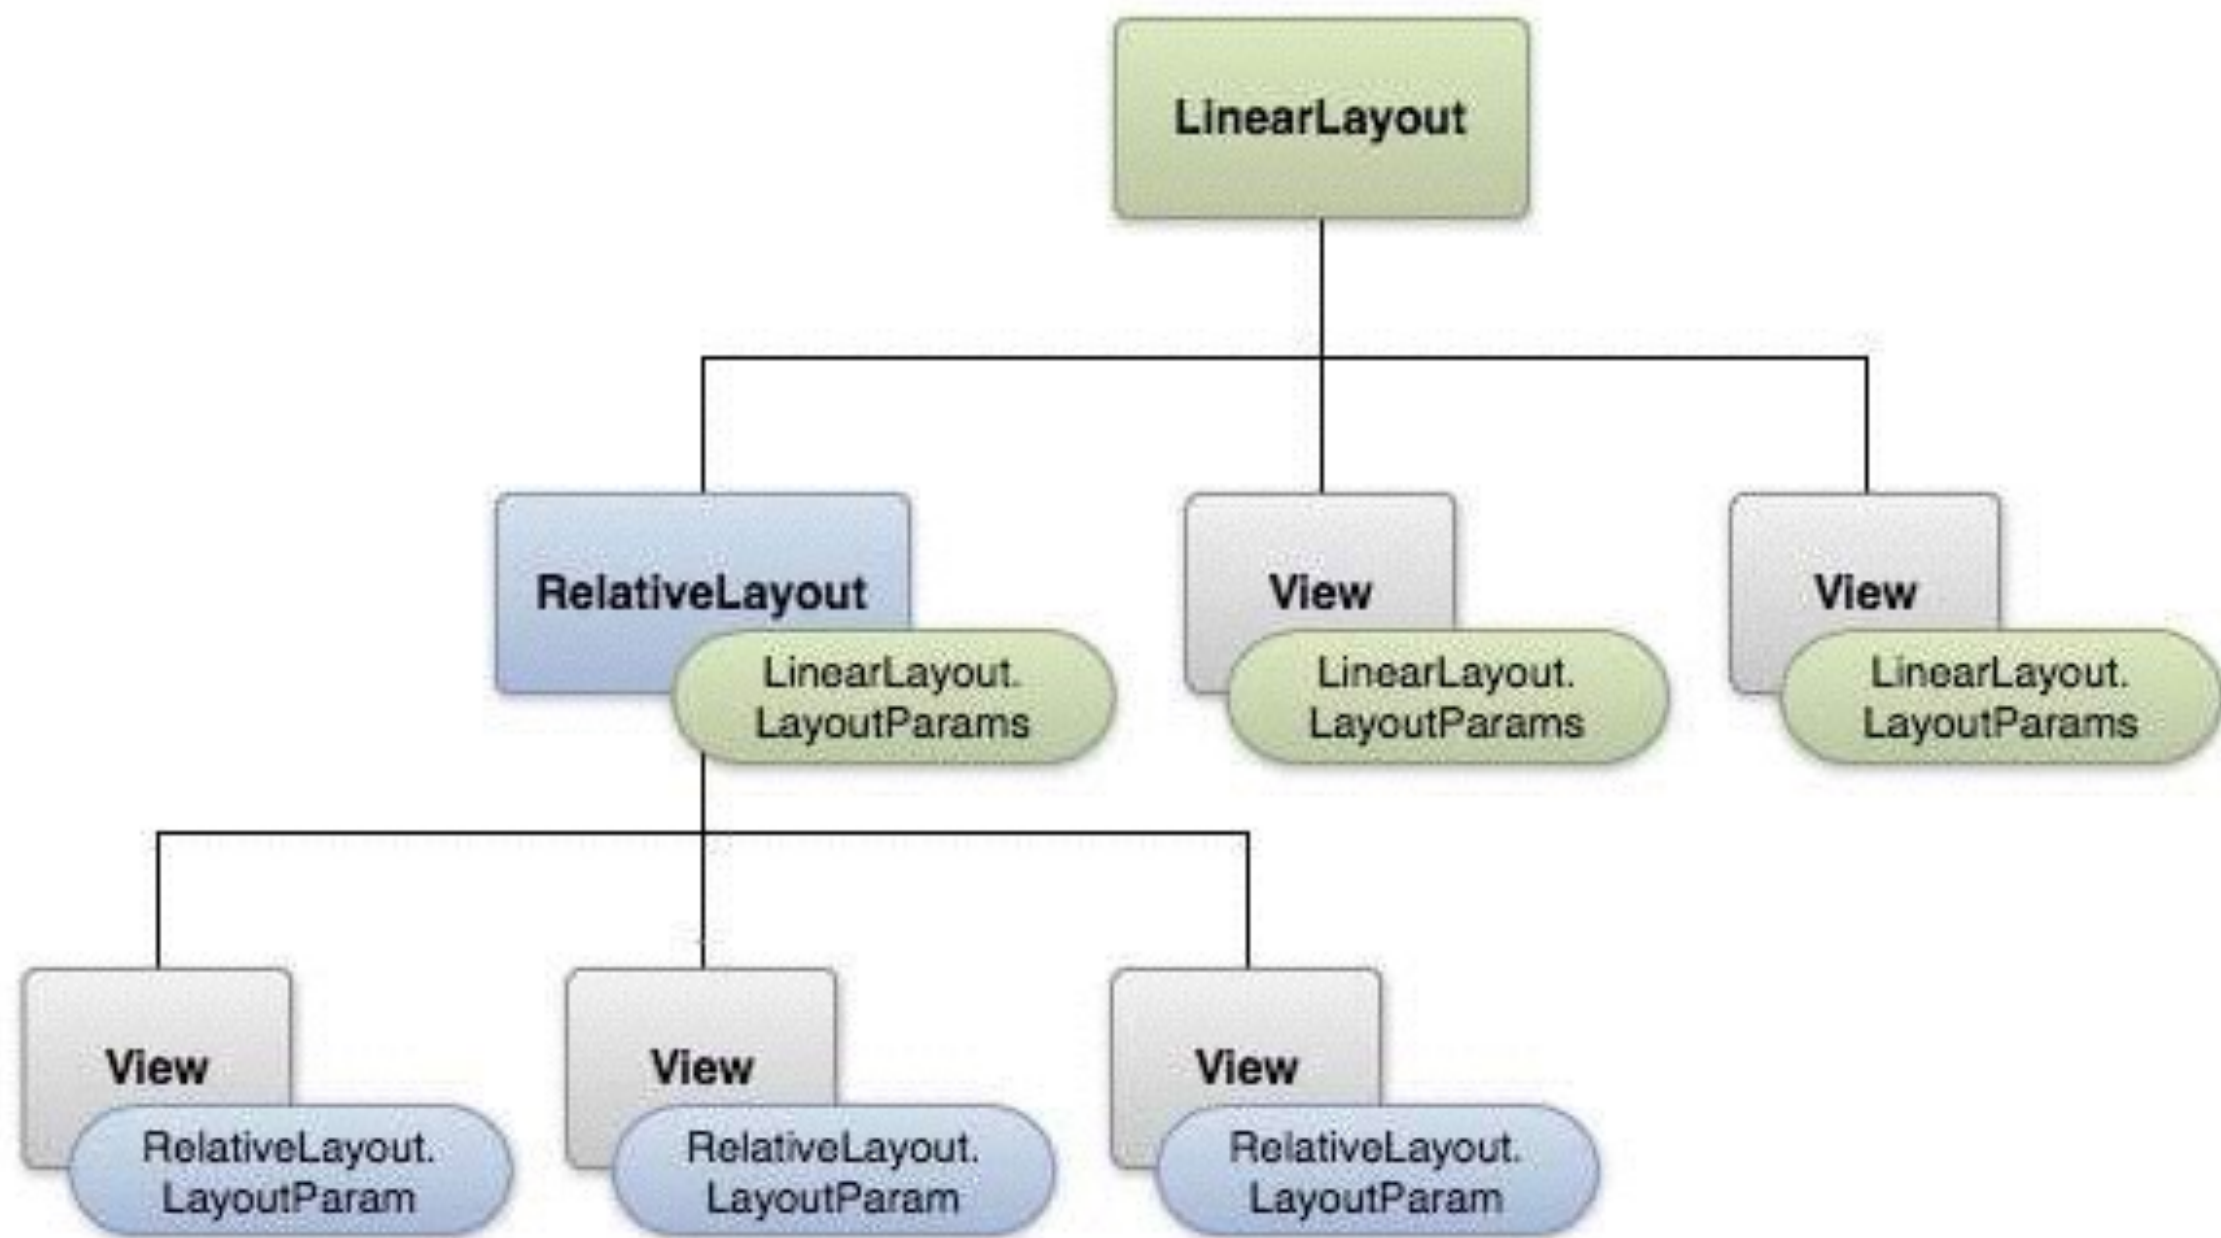

Activity in brief

An Android app contains one or more **activities**.
An Android activity is a screen, similar to windows in a desktop application. Inside an activity you can have **GUI components**. The GUI components are instances of **View or ViewGroup** subclasses.

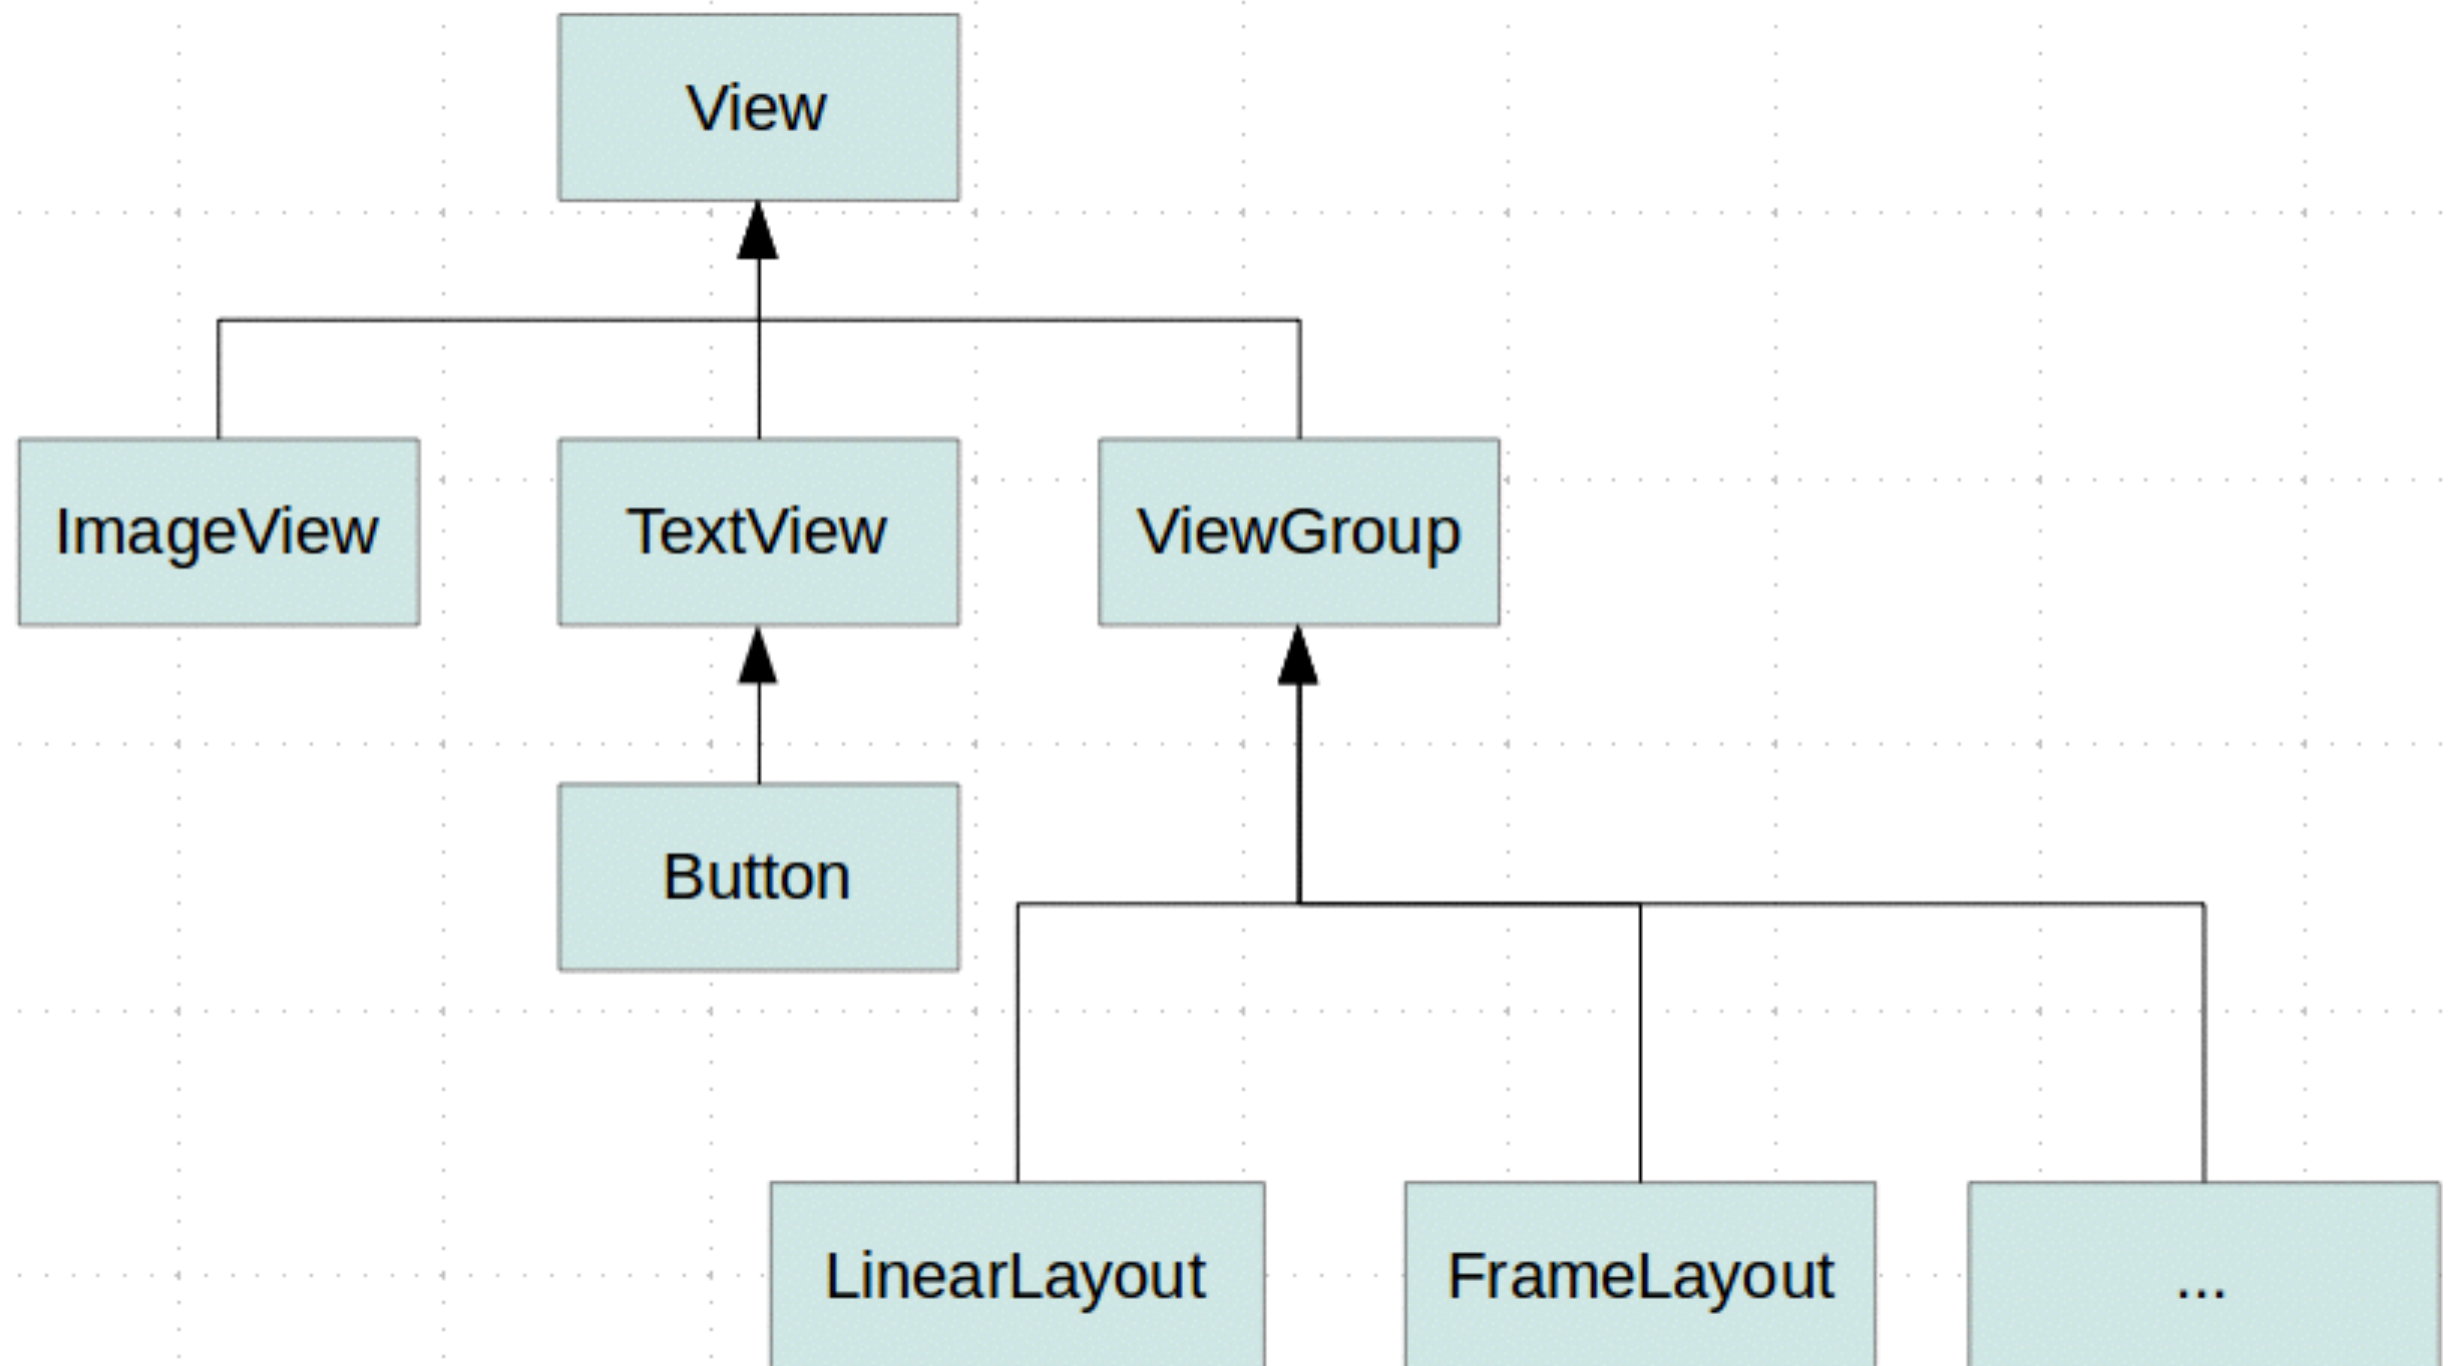

Views
